

Prodo-Pak RV Series

RV-165 • RV-205 • RV-225

SERVO VERTICAL FORM / FILL / SEAL MACHINES

STANDARD FEATURES:

These Vertical Form/Fill/Seal machines have been introduced by PRODO-PAK CORPORATION. The Model RV-Series features dual axis servo driven rotary heat sealing dies in a continuous motion format. It is designed to produce four sided sealed pouches in multiples of two to twelve across the die face. Production rates of 100 to 1000 pouches per minute are possible.

Pouch sizes can range from .50 to 22.5 inches in width. Virtually any pouch length can be accommodated with simple panel mounted adjustment of the servo control for the horizontal sealing die. A wide variety of thermoplastic, laminate, and co-extruded films are compatible with the resistance heat sealing technology incorporated in the RV-Series. Registered printing on a single side or the front and back panel is available.

The Model RV-Series can be equipped to package liquids, creams, ointments, tablets, powders and granular products with the addition of one of the many standard fillers or dosing systems manufactured by PRODO-PAK.

ALLEN-BRADLEY controls and swing arm control enclosure with an interface panel and touch screen display provide the operator with a complete menu of machine settings, production statistics, maintenance information and troubleshooting assistance. Standard features include Stainless Steel Construction to meet wash down and Class 100 regulations.
